baramundi AUT

Manage Software, Optimize License Costs

Which software is actually installed on which computer and how is it used? Often, applications are installed with blanket coverage or a program is only activated for a single use. Company costs for licenses then increase rapidly. However, if you know exactly which application is actually being used, you will know how to reduce your licensing costs. You can find out all the necessary information from baramundi AUT .

baramundi AUT stands for "Application Usage Tracking" and it tracks the usage of every application specified. This keeps you reliably informed about which programs are being used, which licenses you could save on and how a recently introduced software application is accepted. This of course meets all requirements concerning personal data protection.

baramundi AUT supports all **common Microsoft operating systems** like Windows 2000, XP, Server 2003, Vista and Server 2008, Windows 7 and Windows Server 2008R2.

At a Glance

- Detects the level of usage of software
- Easy to configure
- Helps optimize licensing costs
- Helps evaluate the use of new programs
- Can be activated on demand
- Meets all data protection regulations

Licensing

Like all modules of baramundi Management Suite, baramundi AUT is licensed per managed workstation. No separate server license is required. Our [salesemployees](#) will be happy to provide further information.
