

Overview

baramundi Patch Management

Automatic Software Updates

IT security also means keeping applications up to date with patches. Patches plug security gaps, correct errors and add new features. baramundi Patch Management lets you automate the import of patches, saving you time, money and effort.

Imagine having an employee who constantly watches out for new Microsoft patches and downloads them from the Internet. An employee who automatically performs installations according to your wishes, strictly according to your specifications or asks you what, when and where installations should be performed. An employee who works 24 hours a day and does not cost you any more than the licensing fee for a truly good piece of software. Where can you find such an employee?

Quite simple, in fact: baramundi Management Suite. This software ensures that patches made available by Microsoft are installed quickly and reliably.

baramundi Patch Management supports all **common Microsoft operating systems** like Windows 2000, XP, Server 2003, Vista and Server 2008, Windows 7 and Windows Server 2008R2 per native installation, naturally in both 32-bit and 64-bit versions.

At a glance

- Helps to identify security threats
- Powerful patch management for Microsoft security updates
- Immediately productive thanks to automatic updates
- Easy to operate, short training period
- Rule-based patch release
- Immediate entry of job status

Licensing

Like all modules in the baramundi Management Suite, baramundi Patch Management is licensed on a per-managed-workstation basis. No separate server license is required. Our [salesemployees](#) will be happy to provide further information.
