

**BARAMUNDI CHECKLISTS** provide concise, step-by-step expert advice for handling common IT challenges in a straightforward way. You can find more checklists at: [www.baramundi.com/checklists](http://www.baramundi.com/checklists)

## 7 Steps to NIS2 Compliance

Are you responsible for IT in a company affected by NIS2? Time is of the essence, and you should create a plan as soon as possible to meet the new cybersecurity requirements for your organization. We recommend the following steps:

-  **Begin with an Impact Analysis**

Conduct an impact analysis promptly to classify your company according to the new NIS2 directive and based on the NACE classification. This will provide the foundation for planning the necessary security measures.
-  **Register and Report to Authorities**

Establish the necessary processes for registration and prepare for reporting significant security incidents. Practice these procedures so that you can respond quickly and efficiently in a real emergency.
-  **Involve Management in the NIS2 Process**

Explain to your executive team the potential consequences of not meeting the NIS2 requirements or not meeting them on time. Highlight the benefits of proactive implementation of the measures required by NIS2 and show how it can strengthen your company's resilience and reputation in the long run.
-  **Set Up Regulatory Monitoring**

Implement a monitoring system that detects new regulations early. Analyze new regulations thoroughly and assess their impact on your organization.
-  **Plan Your Risk Management Measures**

Perform a comprehensive gap analysis to identify areas needing improvement. This will serve as the basis for targeted actions to enhance cybersecurity. Also, determine whether suitable automation solutions are available to free up valuable resources for other IT tasks.
-  **Arrange Necessary Training**

In Germany alone, three million executives and employees will need to be trained annually for NIS2. The BSI will provide specific information on this continuously.
-  **Kickstart a NIS2 Implementation Plan**

Launch a dedicated implementation project to roll out the measures step by step. Ensure this is considered in your budget and personnel planning.

Effective UEM, like the **baramundi Management Suite**, not only protects against fines but also prevents costly downtimes. Adhering to NIS2 guidelines is not just a legal obligation but also a crucial contribution to company-wide security and resilience.

### ALL ENDPOINTS UNDER CONTROL

The **baramundi Management Suite** empowers IT teams with the tools and flexibility needed for managing today's hybrid computing environments from any location. Learn more about Unified Endpoint Management with **baramundi** at [www.baramundi.com](http://www.baramundi.com).
