

baramundi
perform2work

Benefits

- Improved stability and performance across all endpoints
- Fewer support tickets thanks to early detection of IT issues
- Increased end user satisfaction
- Faster root cause identification of IT problems
- Immediate resolution of issues in combination with the baramundi Management Suite

Digital Employee Experience – For Engaged Users and a More Efficient IT

baramundi perform2work combines simple endpoint monitoring with a proactive Digital Employee Experience (DEX) solution. It captures both end user feedback and performance indicators to continuously and proactively optimize your IT environment.

With perform2work, you can analyze how hardware and software behave across your organization – visualized over time. You'll receive clear, concise reports on crashes and slowdowns. Additionally, you'll gain new opportunities to consider user needs during changes to operating systems or applications.

perform2work notifies you early when a battery's capacity begins to decline. This allows centralized monitoring and planning, so you can replace batteries before users are surprised and tickets are submitted.

Performance and stability metrics only tell part of the story. With perform2work, you'll get real-time sentiment insights and measurable success through continuous employee feedback. Negative user experiences no longer go unnoticed, giving you a full picture of your users' digital work environment.

Slow network connections are a major hassle in day-to-day work. With perform2work, you can collect and analyze network performance data from all endpoints. Bottlenecks like slow connections or high latency can be quickly identified and specifically addressed.

perform2work in Detail

Simple Enrollment & Comprehensive Data Protection

perform2work can be deployed quickly and easily, even across international locations. The processing of personal data complies with the requirements of the EU GDPR.

Comprehensive Access Management

A robust role- and rights-management system ensures that only authorized users can view the information relevant to them. This allows perform2work to be used by IT admins, CISOs, and HR alike.

Visualization and Evaluation of Current and Historical Data

User-friendly dashboards and views display both historical data and real-time insights to identify trends. A clear scoring system enables the evaluation of “good” and “poor” results.

The Outcome

Increased Efficiency

Shifting from reactive ticket processing to proactive incident management increases employee satisfaction, reduces support ticket volume, and frees up IT resources for strategic initiatives.

Lower Costs

The longer problems persist, the more effort and cost are required to resolve them. perform2work mitigates this by identifying IT issues early. It also helps optimize hardware replacement cycles, reducing device-related costs.

Improved Sustainability

By analyzing telemetry data, oversized or overburdened hardware can be easily identified, evaluated, and replaced—ensuring that performance, usage purpose, and employee satisfaction are aligned.
